Micro-needle penetration depth can be adjusted from 0.5 to 3.5mm based on treatment target areas for the treatment of skin lifting, tightening and rejuvenation e.g., hyperpigmentation, wrinkles, acne, acne scarring and pore reduction. Delivered RF energy is tightly focused at the edge/tip of the Micro-Needles, resulting in far less trauma to the surrounding epidermis. This also leads to less down time and pain as compared to a conventional CO2 fractional laser. You may opt to do the treatment(s) with or without the CO2.
